

Future-proof plant planning & erection

CONSTRUCTION PROJECT MANAGEMENT

HVAC planning

We create planning documentation for outfitting your building with properly sized HVAC installations, including hygiene inspections and energy efficiency inspections.

Our specialists take care of the planning and construction phases for HVAC building installations and for sanitation technology (such as sanitation systems). As it relates to this, the focus is always placed on energy efficient, sophisticated technologies and concepts, while remaining within agreed-to cost efficiency parameters. The planning documentation is generated in accordance with HOAI. Within this scope, we also take care of all services, ranging from validating feasibility to commissioning.
