

Future-proof plant planning & erection

PROCUREMENT AND MATERIALS MANAGEMENT

Expediting / production control

We will perform quality and scheduling measures related to plant component purchases to ensure that plant construction remains on schedule.

In particular when procuring complex or large apparatus, on-schedule and specification-compliant fabrication is a key success factor for a plant construction project. Our project managers personally review the components (some of which are specified in-house) fabricated at the manufacturer and verify the progress and quality of the fabrication process. They take appropriate actions in response to complaints or if the delivery date is at risk.
