

Future-proof plant planning & erection

PROCESS ENGINEERING

Process and plant concepts

Our experts for process and plant engineering develop profitable and future-proof plant concepts specifically matched to your production processes. With the assistance of the latest tools under the GENDORF CAX 4.0 concept, we develop plant concepts down to the details for implementation maturity.

We start with the research and drafting of process concepts (mass and energy balances, process selection), develop plant concepts in a next step (layout planning, installation planning), and develop the process engineering implementation of a production process. In a final step, the results are compiled into a digital, intelligent R&I flowchart with all components and integration to the EMC planning documentation, with details down to implementation maturity.
