PREDICTIVE MAINTENANCE

Raw material testing

Nondestructive raw material testing gives us the ability to ensure the quality of your work pieces without damaging the workpieces in the process.

Nondestructive testing of workpieces is a building block toward ensuring the required quality and safety. Depending on the application, various testing methods are available to establish consistency. Our experts select the proper test method for your needs, and perform the tests.

Our services:

Ensure the quality of work pieces with nondestructive raw materials tests, using:

- radiographic examinations
- thermal imaging
- visual inspections
- ultrasound examinations
- helium and tightness tests
- pressure samples
- dye penetration tests
- magnetic powder tests
- wall thickness measurements
- metallography with stereo and microscopic documentation
- endoscopic examinations
- Digital documentation of the test method, including digitalized x-ray film
