

Efficient plant operations & maintenance

MAINTENANCE

Planning support, pumps

Every plant operator must have the objective of making the most efficient use of pumps. Our pump experts will support you in the planning, layout, procurement, commissioning, and initial documentation of pump systems, including peripherals.

In process engineering plants, pumps are central components that keep processes running. Our pump know-how allows us to ensure that your requirements for pumps and pump systems are met and that you use the right pump for your application.

Our services:

- Review of tender/RFP documentation pursuant to operator specifications, application conditions, and standards
- Prepare tender documentation with respect to standards (standardized specifications, spare parts availability, etc.)
- Review proposals, compare proposals, and recommend the best solution
- Process customer purchase orders
- Incoming inspection and tagging machinery
- Amend technical documentation (such as data sheet) and hand over to the principal
- Stage machinery for pickup or delivery and on-site assembly, where required
- Commissioning pursuant to operator specifications, customer training (optional)
- Enter technical data into SAP and archive documentation in electronic form
