

Efficient plant operations & maintenance

OPTIMIZATION OF OPERATIONAL AND MAINTENANCE PROCESSES

Resource efficiency studies

We rely on efficiency studies for energy, media, and materials to identify opportunities along your business processes, from production to administration. Our experts flexibly adjust the studied scope and level of detail to your specific assignment.

We simultaneously look at materials, media, and energy. This allows us to identify opportunities in the three named cost buckets for an operation. We analyze the process equipment, but also the plant operating modes and controls, operational procedures and instructions, and even including production planning. Our approach is adapted to each of the specifically defined objectives, ranging from cursory diagnostics for a large analysis area to detailed studies of individual process steps.

Our services:

- Analyze mass and energy flows in plants/operations/sites
- Balancing, simulations
- Opportunity assessment and quantification
- Evaluate and analyze costs/benefits of opportunities with recommendation
- Workshops and implementation support
