

Efficient plant operations & maintenance

OPTIMIZATION OF OPERATIONAL AND MAINTENANCE PROCESSES

Reliability-centered maintenance (RCM analysis)

Our subject-matter experts perform a criticality analysis and plant assessment with the assistance of RCM (Reliability Centered Maintenance) and RBM (Risk Based Maintenance) analyses in order to optimize the reliability of your maintenance.

Based on a combination of engineering know-how and methodology, our experts work with you to assess their criticality of plants and plant elements. Based on this, we then derive action plans that will accompany you on the path toward reliability and risk-oriented maintenance.

Our services:

- Analyze existing plant data
- Conduct systematic criticality assessments for plants, plant elements and components
- Derive risks on the basis of the criticality assessment
- Define action plans to minimize risks
- Follow-up and support maintenance measures for risk minimization
